

DANIEL AUGUSTIAN GIRSANG

6281260591970 | danielgirsang67@gmail.com | linkedin.com/in/danielaugustian67 | https://danielaugust-resume.vercel.app/

Information Systems graduate with experience in system analysis, software development, and data processing. Skilled in understanding business requirements, designing system workflows, and supporting application development processes. Familiar with database management, API integration, and system testing. Able to collaborate effectively in teams and deliver efficient, scalable, and user-oriented solutions.

Education Level

Del Institute of Technology - Laguboti, Indonesia
Bachelor of Information System, 3.15/4.00

Aug 2021 - Aug 2025

Work Experiences

Code ID - Remote
Go Backend Development Bootcamp

Jan 2026 - Mar 2026

- Developed RESTful APIs with structured architecture for scalability
- Implemented authentication systems (JWT-based)
- Built CRUD operations integrated with databases
- Performed API testing using Postman
- Learned best practices in backend development and system design

PT Telkom Indonesia - Bandung, Indonesia
Software Engginer Intern

Aug 2024 - Dec 2024

- Developed a Node.js application to process k6 performance test results into readable HTML reports
- Containerized the application using Docker for consistent deployment across environments
- Implemented dynamic configuration to eliminate hardcoded test parameters
- Improved efficiency of performance testing workflows across teams

PT Sangkuriang Internasional - Jakarta, Indonesia
System Analyst Intern

Jun 2024 - Aug 2024

- Designed user flow diagrams for SP4N Lapor system to support system development
- Conducted testing and identified bugs in mobile and web applications
- Collaborated with developers to improve system functionality and user experience

Insitut Teknologi Del - Laguboti, Indonesia
Assistant Lecturer of Programing Procedural

Jan 2024 - May 2024

- Conducting tutoring sessions for students enrolled in the Procedural Programming course, covering a Programming Case in the C Language.
- Directly communicating with the main lecturer regarding students' progress to ensure transparency in evaluation.
- Providing constructive feedback and solutions to enhance students' understanding of probability and statistics concepts, actively participating in discussions during review sessions to address challenges, and explaining students' questions about course material.

Project Experience

Personal Budget Management

<https://bit.ly/DemoAppOutsystems>

Developed a personal finance management application using OutSystems Mobile App, enabling users to track income, expenses, and monthly financial performance with real-time visual analytics.

- Designed a relational entity database for transactions, categories, and accounts, implementing efficient indexing for rapid data retrieval.
- Engineered server-side aggregation logic (Sum, Group By, Calculated Attributes) to process financial totals
- Integrated OutSystems Charts by building Data Actions to transform raw transaction records into optimized DataPoint formats for responsive daily bar charts.

SISTA - Sistem Informasi Tugas Akhir

Designed and implemented a Laravel web application that streamlined final project/thesis management and improved the efficiency of defense sessions

- Developed a Laravel-based web application for thesis management
- Designed database schema and implemented MySQL integration
- Built RESTful APIs for data handling and system integration

- Implemented authentication and role-based access control

DWAB - Connect Your Hobby

Developed "DWAB ConnectHobby," a Laravel-based platform that enables students with similar hobbies to communicate quickly and efficiently.

- Developed a Laravel-based platform for connecting users with similar hobbies
- Implemented backend logic and database integration
- Built features for user interaction and communication

Classification Of Malware Data Using The K-Nearest Neighbor Algorithm

Developed a malware classification project using the K-Nearest Neighbor (KNN)

- Built a classification model using K-Nearest Neighbor algorithm
- Processed and analyzed malware datasets
- Improved classification accuracy through feature selection

Student Performance Classification with XAI

Research and developed a machine learning model for student dropout classification using Random Forest with feature enhancement through Contrastive Learning.

- Developed a machine learning model using Random Forest
- Applied Contrastive Learning for feature enhancement
- Implemented SHAP and LIME for model interpretability
- Provided insights to support data-driven academic decisions

Skills, Achievements & Other Experience

- **Soft Skills:** Analytical Skills, Communication, Problem-solving, Teamwork
- **Hard Skills:** : PHP (Laravel) - Intermediate (REST API, MVC, authentication), Java (Springboot) - Fundamental(OOP, REST API basic), Go (Gin Framework) - Fundamental (routing, REST API basic), Python (Fast Api) - (Rest API basic) , React.js - Fundamental (hooks, component structure), MySQL / PostgreSQL - Beginner (query, relational schema), Outsystem – (Reactive Web, Aggregates, Data Modeling, Client/Server Actions)
